

QA Automation Engineer = Rohini Manohar Gund

Following scenarios can be considered in given application:

- 1) The sign in, sign up, sign out and home page validations
- 2) Color of the buttons on all the pages as well as on popup window can be verified
- 3) Functionality of other fields of the tasks can be verified (e.g. Remove, Public, Done)
- 4) Functionality of other fields of subtask popup window (e.g. Id of subtask, remove subtasks, close)
- 5) Functionality of the other links present on the application like – Track Bug, Avenue Code, Test Description - User Stories
- 6) Functionality present on the above-mentioned links

For each scenarios, we can write automation tests.
